Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense conding a polypeptide whose expression is inhibited by the antisense collypeptide or its fragment whose expression is inhibited by the antisense collypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide of specifically binding the polypeptide of specifically binding to proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound's activity; (1) a cullure comprising strains in which the gene compound's activity; (11) a cullure comprising strains in which the gene compound's activity; (11) a cullure comprising strains in which the gene compound's activity; (11) a cullure comprising strains in which the gene to which each of the strains is present in a culture or collection of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            720
strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to recombinant modified AppA phytases having

modified phytase activity. The AppA phytases are derived from a mature

Escherichia coll AppA phytase designated EBC1825 (see AbL16120), and

comprise subsitutions at least one of residues 26, 43, 46, 54, 73, 113,

CC 26, 184, 228, 384 or 410, or at a residue located within 5 residues of

those listed above. The invention also encompasses polymucleotides

concoding a modified AppA phytase and which further encodes a secretion

signal sequence operable in Bacillus subtiliss) comprising the

colymucleotide sequences; and a method for the production of the modified

AppA phytases. The invention also discloses a method of producing an

colympetide having phytase activity; a method of producing a heterologous

colympetide having phytase activity; a method of producing a neterologue

colympetide having phytase activity; a method of producing a neterologue

colympetide having phytase activity; a method of producing a neterologue

colympetide having phytase activity; a method of producing a neterologue

colympetide having phytase activity; a method of producing a neterologue

colympetide having phytase are useful as an animal feed additive,

particularly in feeds for non-ruminant livestock such as pigs and poultry

which lack the digestive enzymes for extracting phosphorus from phytase

contains poters proceed phosphorus. The modified AppA phytases also have

many other agricultural, industrial, medical and nutritional

applications For example, they can be used in the isolation and

recovery of rare metals to produce lower phosphate homologs of phytate,

which may be used in toothpaste and other dental care products as well as

collennial treatments or preventatives of bone resorption (e.g., in

clear, tofu and nutritional supplements); in wet grain milling; percentions

clearing, percentages. The modified
                                                                                                                                                                                                                                                                            Novel recombinant phytase having modified phytase activity comprising modification of amino acid residues in mature Escherichia coli phytase designated EBC18B2, useful as feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   present sequence represents Escherichia coli strain K-12 AppA phytase

The patent discloses recombinant bacterial phytase from Escherichia colicity and Apptase. The enzyme has phytase activity and improved thermal colerance when compared with wild-type phytase. It has improved thermal tolerance when compared with wild-type phytase. It has improved protease stability at low pH. The recombinant phytase is useful for improving the nutritional value of phytate-containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are also used for generating recombinant digestive system life forms, for producing or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. The present sequence is a DNA encoding B. coli appA phytase wild type protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.
                                                                                                                                                                                                                                             Bacterial phytase, K12 appA phytase; protease stability; anabolic; gastrointestinal; untritional value; feed treatment process; therapy; thermal tolerance; growth performance; alcoholic drink; biopulping; non-alcoholic drink; biobleaching; ds.

containing foodstuff by contacting the phytate-containing foodstuff with containing foodstuff by contacting the phytate-containing foodstuff with a pure as pure phytase enzyme mutated phytase (where the phytate in the phytate.) The phytate enzyme catalyzes the liberation of inorganic phosphate from the phytate in the phytate. Containing foodstuff), a method to produce an animal feed containing a containing the plant call, plant part or plant under conditions where the nucleotide sequence is expressed and converting the plant cells, plants or plant into a composition for animal converting the plant seeds, plant of feed), a feed composition for animals (comprising the plant seeds, plant of converting the plant cells, plant parts or plants in admixture with a phytase enzymes foodstuff), a method to treat a human or an animal able to benefit from digestive enhancement by the activity of an exogenous phytase enzymes or comprising administering to the human or animal the plant seed, plant cells, plant parts or plants of a transgenic plant which is modified to contain an expression system which expresses a nucleotide sequence or encoding a phytase enzyme, a transgenic non-human organism whose genome comprising a heterologous nucleic acid sequence encoding a phytase activity. The phytate enzyme is useful for improving the nutritional value of phytate enzyme is useful for improving the nutritional value of phytate enzyme is useful for improving the invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence represents the E. coli K12 appA gene encoding wild-type phytase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                     The invention discloses a new isolated or recombinant nucleic acid which encodes a polypeptide having a phytase activity. Also claimed is a nucleic acid probe, an amplification primer sequence pair, an expression cassette comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the public acid, an antisense oligonucleotide, inhibiting the polypeptide and a second domain, an array comprising immobilised polypeptide and a second domain, an array comprising an antibody that specifically binds to the polypeptide, a food supplement for an animal, an edible enzyme delivery an edible pellet comprising a granule edible enzyme delivery matrix, an edible pellet comprising a granule edible carrier and the polypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, matring whether a compound blunds to the polypeptide, carrier and the polypeptide, matring whether a compound blunds to the polypeptide, comprising a composition, a soybean meal, isolating or identifying the polypeptide, matring whether a compound blunds to the polypeptide, comprised to the phytase polypeptide to enzymatic inactivation in a digestive system and processing of corn and sorghum kernels. The phytase cor inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytate rich ingredients or encoding the Bacherichia coll apph phytase.
                                                                                                                                                                                                                                                                                              * nucleic acid encoding a polypeptide having phytase activity, useful
improving the feeding value of phytate rich ingredients or as an aid
phytate digestion.

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal colerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in dist of numerous animals including mammals, fools and fishes, commercially significant mammals such as plgs, goats, laboratory rodents, commercially significant avian species such as chicken, ducks, doves, parrot, etc.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.

commercially farmed fish such as guppy, zebrafish, molly, swordtail, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present sequence is Escherichia coli K12 appA phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                  US-10-601-319-2

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
